// PROFILE

30-year software engineer with deep expertise in code review, algorithmic evaluation, and AI model validation. For the past two years I've operated AI-agent workflows as a core delivery methodology — not as a novelty but as a production practice. My daily work involves reviewing, refining, and validating AI-generated code across multiple languages and paradigms, establishing quality gates that balance speed with correctness.

I'm experienced in [prompt engineering, structured feedback, code validation, and model benchmarking](#) — skills that transfer directly to AI training and evaluation work. I work independently and asynchronously, deliver precise technical analysis, and treat every evaluation as a craft problem rather than a checkbox.

30 Years professional engineering	7 Languages C#, Python, JS/TS, SQL, more	11× AI Multiplier daily AI workflow integration	319k Lines Reviewed validated in 4 months

// AI EVALUATION EXPERIENCE

My current role requires me to evaluate AI-generated code daily — validating correctness, security, audit-trail compliance, and architectural fit across .NET, Python, and TypeScript codebases. I've developed structured severity classifications, remediation plans, and feedback frameworks for AI output quality. This includes:

- Reviewing and refining AI-generated prompts and responses for production use
- Validating algorithms and software concepts for technical accuracy in regulated contexts (life sciences, finance)
- Providing structured, actionable feedback on code quality, security, and architecture
- Benchmarking AI model performance across different models (Claude, GPT, Gemini) for specific coding tasks
- Tagging and categorizing code by language, complexity, domain, and quality tier

// RELEVANT EXPERIENCE

Technical Lead · SkinConsult (Life Sciences SaaS)

dec 2021 – aug 2026

Stack: C#, Python, TypeScript · Azure · AI-agent workflows · Regulatory compliance

- Daily AI-generated code validation across multiple languages: correctness, security, audit-trail, architectural fit.
- Developed structured feedback frameworks and severity classifications for AI output quality.
- Post-merge code review of offshore AI-assisted codebase: security, UI-compliance, raw SQL, migration validation.
- Multi-model AI orchestration (Claude, GPT, Gemini) — prompt engineering, model selection, output benchmarking.

Technical Consultant · Allergie Centra Nederland

jun 2023 – aug 2026

Stack: Python (ETL, data pipelines) · Azure · .NET · Cloudflare

- Custom data pipelines and ETL in Python: API integrations, external data scrapers, document workflows.
- Code validation and audit-trail enforcement in patient-data context (NEN 7510 compliance).

Technical Team Lead · Belastingdienst (Dutch Tax Authority)

may 2018 – mar 2019

Stack: .NET Core · Test Automation · CI/CD · Structured Logging

- Replaced manual regression testing with automated test suites — reduced cycle from 2 weeks to 2 hours.
- Established code review standards, structured logging, and deployment automation as org-wide practices.

Full Stack Developer · Rabobank

sep 2017 – apr 2018

Stack: .NET MVC · TypeScript · Analysis Services · Peer Review

- Rebuilt financial steering set; introduced pull request peer review as a departmental standard.

Senior Developer → Team Leader · Deltec Software BV (1996–2017)

21 years

Full stack: C#, JavaScript, SQL, CMS, CI/CD, B2B platforms

- Full lifecycle delivery: design, implementation, testing, deployment, maintenance.
- Introduced Continuous Integration, code review culture, and automated builds.

// TECHNICAL SKILLS

Code Evaluation

AI-generated code validation, prompt refinement, algorithmic correctness, structured feedback, severity classification, benchmarking

Languages

C# (expert), Python (data pipelines, ETL, AI orchestration), TypeScript/JavaScript (full-stack), SQL (complex queries), Java/C++ (reading proficiency)

AI & LLM Tools

Claude (daily driver), GPT-4, Gemini, multi-model orchestration, prompt engineering, AI agent workflows, MCP

Testing & Quality

xUnit, NUnit, Moq, pytest, test-first methodology, automated regression, integration testing, CI/CD quality gates

Cloud & DevOps

Azure (App Services, Functions, Service Bus), GitHub Actions, Azure DevOps, Docker, CI/CD pipelines, infrastructure-as-code

Technical Writing

Documentation, code review comments, structured evaluation reports, architectural decision records, incident analysis

// LANGUAGES

- Dutch (native)
- English (C2 — professional technical writing and communication)
- Spanish (basic)

// CERTIFICATIONS

- Python for Everybody Specialization — University of Michigan (Coursera, 2018)
- Certified ScrumMaster (CSM) — Scrum Alliance (2018)
